Heat treatment of tool steel from Deutsche Edelstahlwerke

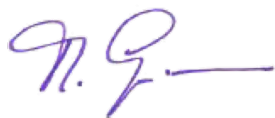

Yalman Endüstriyel Makina imalat ve Dış Ticaret A.Ş. was recently visited and inspected by a representative of Swiss Steel Celik AŞ, a sister company of Deutsche Edelstahlwerke Witten/Krefeld GmbH (DEW).

Yalman is equipped with state-of-the-art facilities for the heat treatment of tool steels. The company's employees possess the necessary expertise, years of experience, and receive regular training to ensure high standards. The processes at Yalman are appropriately standardized and traceable, and the company has in-house calibrated measuring devices and instruments for quality assurance checks.

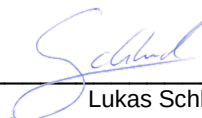

Over the past three years, Yalman has successfully heat-treated tool steels. DEW has initiated a mutual exchange of experiences with Yalman, and we will be informed in advance about any changes in process flows or the use of new or different equipment.

Deutsche Edelstahlwerke confirms that Yalman Knives in Düzce is generally capable of heat-treating tool steels produced by us according to specifications, ensuring the desired properties are achieved.
